New Technology makes Smile Makeovers Affordable for clients with No Dentist Visit.

Opening the door to affordable smile makeovers to a wider range of clients with removable dental veneers, PressOnVeneers.com launches online with introductory videos and new client promotion.

Brighter Image Lab has been offering its process known as “Lab Direct” to clients for over 12 years online. Now, they’ve expanded to include new “snap on teeth” or “clip on smiles” under the name PressOnVeneers.com.

“We’ve invested hundreds of thousands of dollars in developing a never before used process for creating removable veneers for smile makeovers that virtually all clients can afford,” said Bil Watson, president of Brighter Image Lab

“PressOnVeneers.com is the only dental lab in the world to have invested in this much research and equipment to make removable dental veneers affordable without the dentist or the dentist markup cost.”

By utilizing its “Lab Direct” Process and cutting edge technology from Harvard and MIT software developers, who developed the precise CAD design technology, PressOnVeneers.com takes removable veneers to the next level.

Other makers of “snap on teeth” or “clip on smiles” are only available through cosmetic dentists and at a much higher cost. However, the truth is that dentists simply send impressions to dental labs. That’s why Brighter Image has spent over two and half years engaged in painstaking and meticulous development of the “Lab Direct” Process for removable veneers. Eliminating the dentist saves clients about 70% and allows millions of people the opportunity to smile freely with new Smile Makeovers that just press on over a client’s existing smile for a perfect fit.

Made from a durable, yet flexible dental resin, the Press On design will keep you smiling for years! The natural looking, resin-based veneer gives the impression of a perfectly shaped and

visually appealing arch of teeth not available in the hand-made, hand-carved and obsolescent way of making veneers. By injecting at high temperature for strength with extremely thin designs, the dental resin material developed by NASA creates a perfect smile design and contouring with gorgeous detail. More importantly, every smile makeover is designed uniquely for each individual's smile.

Free from shots, free from drilling, free to smile like you always wanted to without any invasive dental procedure at all, the Press On Veneer client is almost anyone with chipped, broken, discolored, missing, or loose teeth. Clients afraid of the dentist or who are unwilling to pay the dentist cost can finally purchase a removable, long-lasting veneer that snaps onto their existing teeth and creates a new, more brilliant smile.

Imagine having the freedom to look as good as you've always wanted, to feel comfortable going out with your friends and family, and to really enjoy smiling and laughing again. Press on veneers makes this possible.

Change your smile, change your life! Why wait for your best smile ever? Why put off enjoying the ease and comfort of having a gorgeous smile to show the world? Press On Veneers now offers the most affordable smile using the best technology ever available. Call Brighter Image Lab today. Go to PressOnVeneers.com to get your unique and wonderful new smile.
